THE BULGARIAN SEMANTICALLY ANNOTATED CORPUS

Svetla Koeva – editor and compiler; authors – *Svetla Koeva, Borislav Rizov, Ekaterina Tarpomanova, Maria Todorova, Svetlozara Lesseva, Hristina Kukova, Tsvetana Dimitrova.*
IBL–BAS, Sofia, 2010. 208 p.

The collective work “The Bulgarian Semantically Annotated Corpus”, as part of the Bulgarian Brown corpus, puts forward and solves specific theoretical and practical problems, which the team of computational linguists from the Department of Computational linguistics of IBL at BAS faces in implementing the idea of building the Bulgarian lexical and semantic network as a hierarchically organized system, where the semantic annotation provides the connection to each synonym set in BulNet and at the same time aims to automatically eliminate the semantic polysemy by choosing the correct meaning in the given context.
